

DoorCallers™

Now you can know who's that knocking at your door!

MADE IN THE USA!

Locked doors serve a purpose. They keep people out until you can verify that you want to let them in!

Our new *DoorCallers* allow visitors to announce themselves at the push of a button! *DoorCaller 1* (shown below at the left) send a voice message, such as *Visitor at door*, directly to your VHF or UHF portable 2-way radio anywhere on or near the premises.

DoorCaller 2 (shown at the bottom right) provides 2-way voice communications between the person (or persons) inside and the visitor.

DoorCaller 1 is only \$495. *DoorCaller 2* is \$100 more. Both systems are compatible with most VHF or UHF analog 2-way radios or we can provide one or more for you at just \$350 each. No special technical skills or contractor installation required. Just mount the call button/box on an outside wall near the door, and the radio call unit inside. Connection is made by common door bell wire.

DoorCallers are ideally suited for use by apartment managers, church offices, day care centers and fire stations.

Call us at 205.854.2611 for a demonstration!
