

# We're Always Looking for grant money!

We've been doing it for a long time, and we are pretty good at it! We even have a name for our services to help YOU find money. We call it the.....

## GRANT ASSIST PROGRAM

We know who has the money and how to get it! Our specialty is focusing on projects related to safety and communications. We've helped all kinds of people all over the USA! We helped a CERT team in Massachusetts obtain a grant for disaster communications, an E911 center in obtaining an all band interoperable back up radio and console. Both of these grants were extended by State Department of Homeland Security agencies.

We worked with an Alabama state legislator to obtain funding for wireless intercoms and power monitoring/reporting systems for the Palmedale Fire department, and most recently, we assisted over fifty applicants in applying for FEMA administered Challenge Grants funded by the Rockefeller Foundation.

We have worked with applicants in obtaining private endowments from Alabama Power, Chevron, Firehouse Subs, Georgia Pacific, and Wal-Mart as well numerous applicants who were successful in obtaining FEMA Assistance to Firefighter Grants. We helped obtain funding for a community fire watch program, police cameras, vehicle intercom systems, school bus tracking, pagers and radios. In short, if the grant opportunity involves wireless communications, video, or data; we've probably done it!

Unlike traditional equipment suppliers, we don't focus on selling a particular brand of equipment. Our job is finding the money and helping you get the best value for your investment. If we see good information, we pass it on to you. For example, Tait Communications does a tremendous job of keeping prospective customers informed. An example is a recently prepared Grant Guide which is available by clicking [here](#). Law enforcement agencies, in particular, will find this to interesting.

Our new *Safer Communities Program* will open the doors to many funding opportunities. The need is to know when these grants become available and have the ability to quickly respond effectively. The *Grant Assist Program* has been developed to help you get your share without hiring on-staff grant writers or even contract grant writers that can cost you thousands of dollars without getting results.

Our services are VERY affordable. It all starts with the *Grant Watch* service. For only \$30 per month, payable annually, we will keep an eye on grant opportunities - federal, state, corporate, and utilities. When a grant of interest becomes available, we will report it to you well in time to respond. The second phase is to offer our services in reviewing your chances for winning the grant and if it appears worthy of pursuing, we will do either one of three things - We will either back out and let you complete the application as you choose, assist you, or do the grant for you. We call this the *Grant Aid* service.

There is no charge for the initial review. If you simply want an assist in preparing your application, we will give you a quote based on an hourly rate. If you want us to do the entire application, we will quote based on the complexity of the grant requirements. If you are successful in obtaining your grant, we also offer a *Grant Administration* service where we assist you in planning, reporting, and completing your application. Want to know more? Just give us a call at 205.202.1269.
