Wireless communications.....

products can provide a variety of services for healthcare, manufacturers, retailers, warehouses, and virtually any business that serves the public.

Our products fall into one of seven different areas – 2-way personal radios for man-to-man (or woman) communications. You can read more about them in our product family brochure at www.ritron.com/broch.html. Fixed station radios are ideal for desktop administrative use. A short video that explains the use of these stations at www.youtube.com/watch?v=KvpvcoowqIM provides additional information. In large buildings, a repeater is sometimes used to extend radio range as explained at www.youtube.com/watch?v=Hnyl9IMNfQ0&feature=related. These three items make up the basic components of a typical on-site wireless communications system.

Ritron offers enhanced products that can be used in conjunction with new or existing 2-way radio systems (either ours or other models). We start with Quick Assistance Voice Calling systems (See www.info4u.us/quickassist.pdf for more information). A more advanced model provides 2-way communications between a visitor and a company representative. Please see www.youtube.com/watch?v=-eGNsIFV4M8&feature=related for more information. Wireless intercoms allow you to combine an existing wired intercom with 2-way radios or to utilize a completely wireless intercom system. See www.youtube.com/watch?v=FbC17yc7rKk for more information.

On the following page, we have provided a feature and price guide on all of our Ritron on-site wireless products. As you will note, the price total consists of the product price plus the programming and shipping cost. The new SLX series portable (an improved version of the original Jobcom portable) is \$254 plus \$35 for programming and shipping on the first unit. Additional units would be \$254 plus \$15 per unit programming and shipping. Some of the more popular options such as stubby antenna in lieu of standard, speaker-microphone, etc. are also shown on the product chart.

You will need an FCC license to operate Ritron radios on the UHF frequency band (best for in-building coverage). An FCC license is not required for operation on the VHF MURS band. If you contemplate using a repeater or non-MURS band frequencies, an FCC license is required. Normal cost for processing and coordination is \$500.

A variety of post sale service plans are available. For additional information, please visit www.ultracareplus.com or call us for a custom program designed for your specific needs.

We will be glad to provide an on-site demonstration or to provide additional information as desired. Thanks for the opportunity of quoting. We look forward to serving you!

The Falcon Team

At your service!

In addition to the products above, we also offer a wireless intercom system that works in conjunction with a VHF or UHF 2-way radio. The LM Series is a completely self-contained receiver, audio amplifier and speaker priced at \$695. These units can be quickly and easily installed anywhere that AC power is available (Solar power is optionally available if desired).

The LPA model is similar in appearance to the unit at the left excluding the speaker. The LPA, priced at \$597 is designed to interface with an existing wired intercom system where it is desirable to control the intercom by a 2-way radio. This eliminates the need to go to a telephone or access control location. Additional information is available at www.usa-radio1.com/prices/loudmouth.
