

PerVu Personal Video Systems

Not all police work is done in cars! What about warrant serving, domestic disputes, traffic control, bike patrols, investigations or other *out of the vehicle activities*? Don't these people also need the benefit of a video recording system?

We think they do! That's why we offer the PerVu Personal Video system! Nearly everything that the officer sees and hears will be documented leaving nothing up for debate when wearing this body worn patrol camera system. Great for on the spot interviews, reading Miranda rights, SWAT and bike patrol... and invaluable when foot chases ensue and officers are out of range of in car camera systems.

The head mounted video camera in this patrol system is feather light and its pliable construction provides years reliable of service. Camera can be positioned so that both the officer's and camera's line of sight are the same. The all in one camera/microphone cable uses a weatherproof mil-spec type connector which fits just one way and will stay firmly in place throughout the day. The

DVR features a three second record button to prevent false start and stops, mode light, 2.5" LCD for quick review of footage review, snap-shot, updateable firmware, and 5 hour operation time with the LCD off. This body-worn system also includes a USB output, pre/post event recording, and alarm inputs for adaptation to emergency equipment or remote switches. Frame rate is a full 30FPS and resolution is a sharp 640x480. The recorder creates files in thirty second increments to prevent accidental elimination of precious evidence due to low battery life, accepts SD cards up to 4GB giving up to four hours of recording, and stores video in a DVI codec which can be reviewed on included software or Apple QuickTime.

The PerVu DVR also accommodates cameras and microphone without standard connections; combined with the built in video motion detection it also becomes useful for covert operations.

The body worn patrol camera system comes complete with head mounted weather-proof camera, weather-proof DVR, 2 standard camera adaptation a/v power cable, helmet mount, 2400mAh lithium battery, AC charger, 1GB Ultra Fast SD card and viewing software. Both camera and Micro DVR are water and shock proof.

What did we forget? Oh yes - the price! It's just \$1,295 complete and available for on line or just give us a call at 800.489.2611. You're going to like PerVu - we guarantee it!
