Never buy another mobile radio – Get RoadTalk Pro!

Lets Face It.....

Communications is a *personal* thing. We don't use mobile cell phones. We use personal cell phones that go where we go. Private 2-way radio systems are a little different. We don't have towers every few miles or so. We may be trying to cover an entire county with a single tower.

Mobile radios work better than portables since they have more power, better antennas, and more effective grounding through the vehicle body. The net result is that mobiles have far greater talk back range than portables even though portables receive almost as well as mobiles. The problem is TALKING BACK!

The traditional solution is to issue two radios – one for the vehicle and one for the person assigned to that vehicle. That can get expensive! Not only is it inefficient, it often becomes necessary for the user to return to the vehicle to talk back. We think there is a better way! That way is call the *RoadTalk III System!*

The system consists of an RF Transponder (RFT) or *mobile repeater* used with an associated personal 2-way radio (not supplied) that functions much like a long distance (half mile or more) wireless microphone that receives calls directly from the dispatch station and retransmits through the RFT back to dispatch. With *RoadTalk III*, your personal radio talks back with the power of a mobile!

If you wish, you can connect your mobile laptop PC to the RFT unit to select up to 32 internally programmed frequencies that can be controlled by your X100 personal radio. If you don't have a mobile laptop PC, you might want to consider the purchase of a low cost Netbook computer. The Dell Inspiron Mini 10-v is an excellent choice for under \$300! Additional information is available at:

http://configure.us.dell.com/dellstore/config.aspx?oc=dncwfa2&cs=19&dgvc ode=ss&c=US&l=EN&m_1=RBRU10H&dgc=SS&cid=39716&lid=1003790.

RoadTalk II luses an analog portable while the RFT can operate in both analog and IDAS (NXDN) digital modes or the system can be used with P25 systems when operated in the analog mode. Think of it! For less than the cost of a P25 mobile or handheld, you can have BOTH a mobile and a handheld with the communications power of the mobile! There is nothing else quite like *RoadTalk II* – you're going to love it
