

RoadVu II

Vehicle Surveillance System

from Falcon Direct

Litigation avoidance and improved administrative control!

FEATURES

- Complete system as low as \$995!
- Removable CF memory card records up to 16 hours of vehicle travel activity!
- Pro grade camera system & DVR!
- Optional 2nd camera and GPS available at slight additional cost!
- Accelerometer optionally available
- View & store data on Windows PC!
- No monthly or annual fees!
- 2 year factory warranty!

Demonstration On Request

New administrative tool improves driver performance and reduces litigation exposure!

Our new *RoadVu II* system is designed for litigation avoidance and improved administrative control!

RoadVu II monitors and records, speed, stops, location, as well as On/Off condition of head lights, emergency lights, overhead lights, and brake lights with time and date stamps of all events. It's all done with a small windshield mounted camera and a vehicle recorder that is no larger than an ordinary 2-way radio.

The standard system, is just \$995 including a micro-sized camera that mounts behind the vehicle mirror and professional grade DVR.

You can add a second camera and monitor for driver compartment viewing for an additional \$300. GPS with street location information adds \$200.

RoadVu II is easy to self install, or we can optionally provide on-site installation anywhere in the USA

The *RoadVu II* system records every trip on a continuous loop Compact Flash(CF) card with up to 16 hours of recording /playback capability.

An introduction to the *RoadVu II* system

Falcon Direct is a leading supplier of vehicle camera systems (See our web page at www.vehiclecameras.us). Our primary focus has traditionally been on serving the needs of law enforcement users with the main objective of protecting officers from frivolous charges, staying out of court, winning if court action was necessary, and providing an additional administrative tool to maximize personnel resources.

Over time, we found that we had overlooked the high cost of insurance associated with first responder vehicles. We learned that the high premiums had forced many government agencies to absorb extremely high deductibles which could cost thousands of dollars per year.

Since most accidents are attributable to driver error, it is vital that any system fleet administrator KNOW exactly what happened when an accident occurs and to have the ability to monitor driver performance as necessary.

While our traditional law enforcement camera systems could be used for monitoring Administrative, EMS, Fire, and Utility vehicles; the cost was deemed to be prohibitive. What was needed was an AFFORDABLE vehicle camera system with the quality and performance of our law enforcement systems. We achieved that objective with the development of our new *RoadVu* system.

The basic *RoadVu II* system records up to sixteen hours of travel activity on a standard Compact Flash memory card that can be securely locked in a mobile DVR designed for rough use. ALL vehicle activity can be monitored including turning on/off of headlights, overhead lights, and emergency lights as well as brake lights.

The forward facing camera records all activity in front of the vehicle with a wide angle high definition view using a low light level color camera. A similar camera is optionally available for use in the drive compartment.

The CF memory disk can be removed and viewed on any standard PC with a CF card reader or with a low cost USB connected reader. Travel data can be reviewed by time and date, even stored to the PC hard drive or CD's as desired. That's a LOT of capability for just \$995!

You can upgrade to a two channel DVR and a second camera for viewing the driver for just \$300 more. If you wish, you can add GPS tracking that will give you moving speed reports and street address information for an additional \$200. Best of all, there are no monthly service fees or annual licensing charges. Most users can install the *RoadVu* themselves or we can provide information if desired with a \$250 trip charge to any location in the Southeast plus \$150 per vehicle for installation.

We offer an optional Accelerometer for just \$200, but since *RoadVu II* is capable of continuous travel recording, this option is generally not required for most users.

Does *RoadVu II* pay for itself? Let's assume you purchase ten thousand dollars worth of equipment which would equate to about seven units including installation. We can set this up on a five year annualized payment plan or monthly payments of just \$208 per month. For less than \$2,500 per year, you have the potential of monitoring driver performance on seven vehicles plus possibly reducing insurance payments that could easily exceed your small investment by a factor of ten times or more! That's why we can say that *RoadVu II* doesn't cost – IT PAYS!
