

Want a better internal communications system?

Want a radio that works WITHOUT batteries?

Want to reduce PA noise pollution?

Want American made products with the lowest purchase and operations cost possible?

If your answer to the above questions is "Yes", we have the answer. It's called a Stationary Radio Unit or SRU. Just plug it in an AC outlet and you can send and receive messages to and from any VHF or UHF 2-way radio regardless of brand or model. Unlike handheld radios, you'll never have to worry about a dead battery or a missing radio.

Put one in the reception area, another at exit and entry doors for direct communications to managers and security personnel with 2-way radios. Put one in vendor or shipping waiting areas to provide instructions to vendors and drivers. You can broadcast messages from a handheld radio directly to the SRU with external speaker in the customer lounge area. Reduce PA noise pollution with direct manager messages.

Need some handheld radios to go with the Stationary Radio Unit? We've got them at great prices. Want to try before you buy? Not a problem! Just give us a call! Additional information is available at www.info4u.us/onsite.pdf.
