

SiteProtect

Protects – Restores - Alerts

from Falcon Direct, Inc.

Affordable and efficient Administrative tools for VFD's!

New SiteSecure package protects your repeaters and let's you know when there is a problem!

Sags, spikes, and surges are the natural enemies of 2-way radio base stations and transmitters. They come in two forms – lightning through the antenna or AC outlets which may also be subject to abnormal line voltage.

We have a three part solution in the form of a combination surge protector with short term internal battery backup, a coaxial transmission lightning protectors, and an automatic radio reporting system to let you know when there is a malfunction at a remote transmitter site.

The AC-Reporter (shown at bottom left) alerts you when there is a power failure and restoration at a remote repeater site.

The Ditek DTK-BU600Plus shown at the upper left protects AC, phone, and Internet connected devices and provides emergency back up power until your generator or battery back up system can take over.

The PolyPhaser IS50 coaxial high voltage transmission line lightning protector (middle left) should be on every antenna system.

Our SiteProtect package protects your base/repeater, provides backup power and notifies you of a problem!

FEATURES

- Ditek DTK-BU600Plus just \$135!
- Polyphaser IS50 just \$69!
- AC-Reporter just \$449 complete
- Programming and training included
- New SecurIT system detects intruders and notifies you by radio! No monthly charges! Just \$995 complete!
- Call for more information or demo!
- Custom service programs available! See www.ultracareplus.com
