

SmallTalkers

Making communications personal!

from Falcon Direct, Inc.

It's time to switch from Big Talkers to SmallTalkers. Spend less, get more – UHF RF or RoIP!

Now, there is a new way to talk with your choice of our TC-320 UHF personal 2-way radio or add our incredible *EXTender iWalkie* software to your Blackberry, iPhone, or Windows Mobile PDA. Now, a single device can be both your PDA and your 2-way radio!

For local area use, the micro-sized TC-320 offers performance, power, and reliability for the incredibly low price of just \$149! The TC-320 is compatible with virtually all UHF radio systems regardless of brand or model.

For administrative use, just download our *iWalkie* software to allow your PDA to operate on your 2-way radio system from anywhere in the world. The price is the same – just \$149 plus interconnection to the Internet from your 2-way radio system. You can learn more about the *EXTender* system on the reverse side!

Blackberry Curve

TC-320 SmallTalker

Put an end to big heavy radios and high maintenance costs with *SmallTalker* flexibility and affordability. When you need to talk, *SmallTalker* is your total solution!

Call us anytime, 24/7 at 205.854.2611

Your choice of TC-320 or iWalkie – Same price – Just \$149!

SmallTalker offers.....

a whole new way to communicate! If you are tired of paying big dollars for big radios with big repair costs that just don't fit your body, you need to know about our new SmallTalkers! Two versions are available – the TC-320 and the EXTender. Let's start with the TC-320.

The TC-320 is a UHF 16 channel radio that is less than 4" high and weighs less than 5 ounces, yet it has twice the audio of the big radios. It is rugged and reliable, tested for dropping at a height of five feet without damage. The TC-320 can be programmed on up to 16 channels and it costs only \$149! Order on line at www.info4u.us/TC-320_Prices.pdf.

For office use, we offer a companion fixed station unit that eliminates the problem of office units being "borrowed", drink and dropping problems, and you'll never have to buy another replacement battery. See www.youtube.com/watch?v=KvpvcoowqIM for an interesting video on the amazing Jobcom fixed use communicator – It's only \$345! More information is available at www.usa-radio1.com/prices/basestations.

If you are having problems communicating between your existing 2-way portable radios or you need more range as a result of expanded facilities, we offer a simple and affordable solution. See www.youtube.com/watch?v=Hnyl9IMNfQ0&feature=related for an interesting video on the \$995 Liberty Repeater. See www.usa-radio1.com/prices/repeaters for more information.

An Introduction to the *EXTender!*

If you are already using a Blackberry, iPhone, or Windows Mobile PDA, you may want to use your PDA as your 2-way radio! It's as easy as adding our iWalkie software at our special church and school price of just \$149 and connecting one of your PC's to a SiteCast Server (shown below to the left). The PDA software creates a Push-to-Talk software application that allows your PDA to communicate over the associated 2-way radio system from anywhere that broadband wireless data connectivity is available – either cellular or Wi-Fi as desired.

An associated device, known as a *SiteCast* is used to interface an Internet connected PC to an existing 2-way radio or an optional radio module. The system is managed on a dedicated server with a web hosting plan. A single SiteCast controller can provide service to all users in a specified group such as a county school system. Additionally, the system can provide access from any software enable desktop or laptop PC to provide Push-to-Talk communications to all system users. Best of all, the cost is VERY reasonable – just \$1,580 for the Server (Add \$349 for an optional radio if desired). There is no additional cost other than the monthly charge for web hosting (typically less than \$20 monthly). Additional information is available at www.info4u.us/EXTender.pdf.

What else is new?

Got a problem with cell phone interruptions and/or cheating? We've got a simple and affordable solution! For additional information, please see www.info4u.us/710.pdf.

Got a problem with in-building cellular coverage? We've got simple and affordable solutions! For additional information just give us a call at 205.854.2611 and ask us about our in-building cellular amplifiers.

Have you heard about the Co-Pilot? This incredible system tells you bus location and driving speed in real time via the Internet. Both staff and parents can view bus activity! You can communicate with drivers and you will be notified by email if a bus is driven after hours. Additional information is available at www.info4u.us/copilot4buses.pdf. Conventional VHF and UHF radios and cameras for bus administration are also available. Call for more info.
