

We've been reviewing the data.....

and the results are impressive! We surveyed a number of vehicle fleet management system users for their comments on this incredible new technology. Here are a few of those comments.

Largest Telephone Company in the USA

In addition to our fixed wired phone services, we also provide wireless data network service to a number of companies who resell our services to fleet management system providers. One day we decided to install the equipment to track vehicles in our Midwestern operation – our productivity went up 25%!

Largest Truck Rental System in the USA

We recently equipped all of our rental vehicles with the user's choice of vehicle tracking, vehicle tracking with 2-way status messaging, or vehicle tracking with status messaging and navigation. This has proven to be a highly desirable offering to our customers with typical productivity up 15% or more.

Alabama Utility Service Company

Our business is providing line locating services for contractors before they dig near utility right of ways. Our field service personnel generally work from their home and leave directly for their first assignment without coming into an office or dispatch area. At the end of the day, they return to their home. Hourly reporting has been on the honor system. When we covertly installed Navman units in several employee vehicles, the results were unbelievable. On the very first day, one employee reporting leaving shortly after 7 AM when in reality, he didn't leave until 8:45! This same employee reported completion of his last job at 5 PM when he had actually started home at 3 PM.

Mississippi Police Department

We originally installed vehicle tracking equipment for a number of reasons – notably to monitor officer activity. We often had no idea of the location of our investigations personnel – a dangerous and unmanageable situation. Additionally, our officers were often accused on doing things they shouldn't do or not doing things they should be doing. We also had a problem with officers leaving the engine idling when they were out of the vehicle. After installing the system, our gas savings easily doubled the cost of the system and we received a surprise. Patrol activity increased over 10%!
