Vodaeo
Voice, Data, and Video working together for you!

Detect – Identify – Report for public safety use!

Product Overview

Vodaeo Reporter

In this age of advanced technology, we have many choices to make our communities safer, reduce insurance claims, and improve the efficiency of first responders. The Vodaeo Reporter is the outgrowth of over a decade of experience in wireless notification systems. Just a short time ago, we offered a product known as the *Companion* used courtrooms all over Alabama and later by merchants working in cooperation with local law enforcement agencies. We offered a separate product, known as the *CrookCatcher* which is widely used for wireless surveillance.

We recognized a need for affordable wireless notification capability used in conjunction with intrusion and smoke detectors which resulted in the development of a new product which we call the *Defender*. In the conceptual stage we discovered that a single electronic processing unit could provide the combined functions of the *Companion*, the *CrookCatcher*, and the *Defender* by simply selecting the desired functionality from a wireless sensor or call button. This combination product is now known as the *Vodaeo Reporter*.

A single Vodaeo Reporter can be purchased by even the smallest municipality for use by law enforcement as a portable wireless surveillance unit. The price is just \$995 including a portable wireless motion sensor.

Entry of monitored premises activate a recorded playback message that is broadcast over the police or fire radio system, or both systems using the dual notification option (\$795).

The standard Vodaeo Reporter is designed to operate in conjunction with existing VHF or UHF 2-way radio systems. The dual mode notification option announces an alarm condition over both VHF and UHF radio systems simultaneously!

County wide coverage for Sheriffs departments or large municipalities is made possible through the use of an optional long range extender for an additional \$1,295.

During the day or during court sessions, the Vodaeo Reporter can be moved to the courtroom to provide instant alerting of law enforcement officers if there is a problem. Activation is made with a single button on the Vodaeo Reporter control unit or optionally (\$59) by a wireless emergency call button. These systems are also popular with merchants at high risk for assault and robbery.

The Vodaeo Reporter can be used at churches, municipal offices, schools, or high risk business premises to detect and notify first responders in the event of fire or unauthorized entry with no delays and no monthly service charges. Just add an optional \$59 smoke detector and you are in business! For a demonstration, just give us a call!
