Note 1: The radios above can provide a variety of functions depending on the needs of the user. The PocketMate and the JBS146/446 are analog only radios. The other radios, with the exception of the i500 and m370 are capable of either analog or DMR digital operation. The JBS146/446 is capable of operating on VHF, UHF, or VHF MURS frequencies. See [www.mursradios.com](http://www.mursradios.com) for more information on unlicensed radios (MURS does not require an FCC license, nor does ). All portable radios use a standard desk charger (included) except the PocketMate which uses a Micro USB charging cable. Special price on the TPD8000 is applicable to black models only. See [info4u.us/covertaudio.pdf](http://info4u.us/covertaudio.pdf) for portable radio audio accessories.

Note (2) See video at <https://youtu.be/3yXOoOyP3d>. See also comparison of the RDR2500 Series with the Motorola CP200d at [www.info4u.us/Compare2.pdf](http://www.info4u.us/Compare2.pdf).

Note (3) The two radios at the right are special purpose radios used as a part of the *CareNet Program*. See [info4u.us/CareNet.pdf](http://info4u.us/CareNet.pdf) for additional information. The i500 is for use on existing WiFi networks and are ideal for very large and/or multi-story buildings and/or multiple buildings (such as a college campus) where wide area coverage is desired without the use of a repeater. More information on repeaters is available at [info4u.us/Repeaters.pdf](http://info4u.us/Repeaters.pdf). First year's WiFi or PoC Network fees, as applicable, are included in price. An annual fee of \$99 applies after first year on the i500 WiFi portable (\$149 on the m370 mobile radio). The m370 operates on the PoC Network, which is a fee-based system. See [info4u.us/TeamTalkers](http://info4u.us/TeamTalkers) for more information.
