

I-Base Repeater

Your simple and affordable narrow band solution!

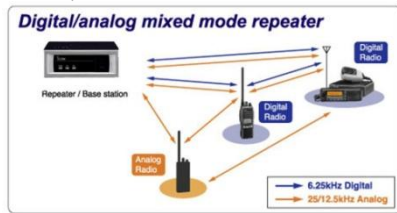

from Falcon Direct, Inc.

Covert your existing repeater to narrow band for just \$995!
VHF or UHF – Up to 32 channels

Looking for a simple and affordable migration plan to 12.5 kHz narrow band? Start by replacing your existing repeater station with the incredible new *I-Base*!

The *I-Base* is compatible with 25, 12.5, or 6.25 kHz channel spacing, offering full analog and IDAS (NXDN) digital capability. This allows you to continue using existing radios and replace them with new technology radios as your budget allows.

The *I-Base* works best with the ICOM IDAS base, mobile, and portable radios. We'll be glad to provide a demonstration at no charge of obligation. Give us a call at 800.489.2611 for a demonstration. You WILL be impressed – guaranteed!

New *I-Base Repeater* meets all FCC current and proposed standards including 6.25 kHz!

Additional information at www.icomfuture.com

FEATURES

- Complete VHF or UHF PC programmable repeater – just \$995!
- Connects directly to existing duplexer and power supply
- Easy to set up and install – No technician required!
- Operates in both analog and NXDN digital modes
- Fully compatible with 25, 12.5 or 6.25 kHz channel spacing!
- Up to 50 watts of power directly or can be connected to external PA amplifier currently used with existing repeater
- 2 year warranty standard with free shipping!

Call us anytime, 24/7 at 800-489-2611

Your choice of VHF or UHF – Same price – Just \$995!

Narrow band migration.....

Doesn't have to be complicated! Even the decision to go digital, or which type of digital doesn't have to be complicated either. You can address both requirements by simply exchanging our new *I-Base* Repeater with your existing repeater!

Here's how it works. You tell us the frequency and tones used on your current repeater. We send you a new *I-Base* repeater, programmed and ready for operation. All that is required is disconnecting the current duplexer, antenna, and power connections, then connecting the *I-Base* repeater. Your total cost is just \$995 for a brand new repeater that meets all current and proposed narrow band requirements including 6.25 kHz! If you would like additional information on narrow band requirements, please visit www.info4u.us/Narrowband_FAQs.pdf.

Your new *I-Base* VHF repeater provides a full 50 watts of power and is available in either VHF or UHF models at the same price. Right out of the box, it is ready for operation on 25, 12.5, or 6.25 kHz channels with your choice of CTCSS, DCS, or RAN privacy codes on either analog or digital channels, or both.

The *I-Base* Repeater in the analog mode is fully compatible with MotoTRBO or P25 radios as well as the NXDN digital mode used by ICOM, Kenwood, and Ritron. Unlike the MotoTRBO repeater which must be set in the analog or digital mode, the *I-Base* can handle BOTH modes simultaneously. This allows you to keep your older analog radios and phase in digital radios as budget allows. You don't have to keep operating in the analog mode until you can switch all radios, nor do you have to replace all radios at one time to go to the digital mode. You can keep your old repeater as a standby and switch from your *I-Base* to your original repeater just by switching a few cables.

The *I-Base* Repeater is fully compatible with our I-Box vehicular repeater system as well as our EXTender interoperable bridge to provide connection to any type of radio system (including 700/800 MHz trunked systems). Additional information is available at www.info4u.us/InterOpPlan.pdf.

As you can see, it is neither difficult or expensive to comply with the new narrowband standards. As far as digital is concerned, we extend to you a very special offer. First, we will supply a new *I-Base* Repeater for a 15 day evaluation at no cost along with two IDAS analog /digital portables to prove the benefits of making the migration to digital. To arrange for a demonstration, just give us a call at the number below. You'll be glad you did!
