ACCESSORIES TO ENHANCE YOUR JOBCOM RADIO

High Audio Output External Speaker (RSP-5)

External speaker offers louder (5 Watts of audio output), clearer reception of incoming calls. This is a great accessory for noisy locations or in certain mobile applications and is especially useful when combined with the RM-7 hand microphone.

Mounting Bracket (JBS-MMK)

Optional wall or mobile mounting bracket. Allows permanent mounting of the radio.

12 VDC Adapter (CCL-M)

Adapter plugs into standard vehicle cigarette lighter allowing the radio to be used in a vehicle.

Replacement Flexible Antenna (AFB-1545)

Dual band (VHF/UHF), flexible antenna with 90° pivoting elbow.

Long range Antenna Options

External antenna, magnetic mount, and cable are available for extended range applications.

Base Station Mobile includes: AFB-1545 flex antenna, RPS-1A 110VAC power supply and manual.

Base Station/ Wireless Intercom

JBS-150/450

New from Ritron, the first Base Station/Mobile radio designed specifically for jobsite communications. The Jobcom JBS gives you a new way to provide instant radio communications where you need it, when you need it.

A Radio Designed To Stay Put

Ordinary portable radios are great when you need to carry communications with you, but there are times when being "portable" is exactly what you don't want.

Leave a portable radio on a desk or in a vehicle and it is likely to walk off with someone that needs it. When the time comes, your radio isn't there for you.

The Jobcom JBS is a compact, easy to program base station/mobile radio specifically designed to stay in one place. It doesn't

invite borrowing, and its rugged, metal enclosure can be mounted permanently

so you can be sure it isn't going anywhere. Since the JBS runs from its included 110VAC adapter (or 12VDC w/opt. adapter), it will always be ready to use—no dead batteries or overcharging to worry about. Its one year warranty will give you even greater peace of mind.

Like A Wireless Intercom

The JBS works with your existing color dot and star frequency radios, but it is so easy to operate new users won't even know they are using a radio system. With its large easy to find push-to-talk button and automatic level control for

clear, consistent transmissions and 1 Watt of loud clear audio through its large speaker, the JBS is ideal for any place you need a radio. Whether it's an office, a trailer, a forklift, a golfcart—the JBS is at home any place you always want to find your jobsite communications handy.

A Full Line of Accessories

The JBS can use a full line of accessories that make it even more useful (see back). The audio accessory jack on the JBS accepts a variety of productivity enhancing add-ons: the hand mic provides convenient remote push-to-talk operation, an external speaker can help in high noise environments, or choose a headset with boom mic for even better high noise performance. The mounting bracket can be used in a vehicle, on a wall, or any place you want to be sure the JBS will stay put. An external antenna and related accessories will help improve JBS performance.

Another Innovation from Jobcom

Ritron invented jobsite radio and continues to lead the industry in innovation with new and exciting products. Jobcom products include a complete line of jobsite radio products providing a complete system for instant on-the-job communications.

Quick Facts
