

Product Profile

AutoPatrol

Introducing.....

the first real advancement in foot patrol communications since the 2-way radio. We call it the AutoPatrol system. If you are involved in mall, plant, store, or warehouse security, you will have another word – INCREDIBLE!

We are not experts in security but we know that effective security involves systematic patrol of the premises. For years, the procedure has been primarily one of making the rounds and “clocking in” at designated checkpoints. Now there is a better way!

The HYT Patrol system replaces the time clock with an efficient and affordable wireless integrator. As a guard walks by designated checkpoints, a weather proof transponder automatically exchanges data with the radio worn by the guard. The date and time of activity is recorded and later downloaded to an administrative PC which accumulates the data and automatically compiles a shift activity report.

Gone are the days of required supervision and multiple reports – AutoPatrol does it for you! Now you can document all activity, develop better administration routines, and provide enhanced safety for your security officers.

One of the key functions of the AutoPatrol system is officer safety. The Patrol radio used as a part of this system has features found in no other personal communicator, yet it is comparable in price to a Motorola PR400. Here are just a few of the things it can do!

The new TC-700ExPLUS is intrinsically safe for use in hazardous atmospheres, is IP66 full immersion rated, and MIL-SPEC approved along with the highest audio output of any personal 2-way radio.

If an officer does not show up at a Patrol Point within a designated time, an automatic alarm signal will be transmitted to all radios on the systems. If an officer is down, the Patrol radio will send an automatic emergency signal. Some of the newer HYT Patrol radios even have built in GPS for pinpoint location of a non-reporting officer!

For more information on the AutoPatrol system, please call us at 800.489.2611 or email sales@falcondirect.com. If this is your first introduction to HYT, we invite you to learn more about the company and the management at <http://www.hyt.cn/01about>. They have come a long way since 1993 and the ride has just started!
